CARBON

LIGATURE

The new CARBON ligature, due to its lightness, will not interfere with the reed's vibration and will have only one role, to hold the reed on the mouthpiece.

- A carbon fiber ligature that is long lasting, durable and reliable
- With regards to sound, this ligature removes all of its own influence and allows for the reed to vibrate naturally
- The harmonic spectrum is pure, full, and perfectly homogeneous in all the registers
- An optimal sound projection
- Attacks and articulation are made easier
- Made in France

Clarinet

	Ligature and plastic cap		Plastic cap only
	With black thumb screw	With bronze thumb screw	
Bb	LC81BLP	LC81BRP	C81P

Saxophone

	Ligature and plastic cap		Plastic cap only
	With gold thumb screw	With red thumb screw	
Alto	LC87GOP	LC87REP	C87P
